

Ward Systems Group Inc.

Press Release

February 1, 2012

ChaosHunter Trader

Ward Systems Group now offers the ChaosHunter Trader, a separate program which allows you to send trades based on formulas developed in the previously released ChaosHunter software directly to the Interactive Brokers (IB) Trader Workstation. ChaosHunter uses evolution to construct formulas that produce buy/sell signals in the financial markets. It meets the needs of those traders who don't have the time to experiment with constructing rules for making buy and sell decisions. The ChaosHunter Trader includes a utility to export data from IB for use with ChaosHunter to develop those formulas. The ChaosHunter Trader allows you to trade a whole portfolio of models. You have the option to create consensus trading signals based on several different models. ChaosHunter Trader sells for a list price of \$895.
