## **ChaosHunter Formula Converter for TradeStation**

Ward Systems Group announces a free converter program that translates a formula stored in a ChaosHunter (CH) model file into a snippet of TradeStation EasyLanguage (TS EL) code. Before the converter was developed, in many cases CH formulas were not directly transferrable into TS EL. They might have required editing after the formula was pasted into the TS EL editor. The converter is programmed to properly translate all ChaosHunter formula's operators (including conditional and Boolean operators), technical indicators, input and output scaling, chaos input, as well as trading signals.

The interface is quite simple and self-explanatory: you browse to a CH model file and open it up. The program automatically displays the original CH formula on top and the converted TS EL code on the bottom. You click the "Copy To Clipboard" button to save the code snippet into the clipboard, then switch to TS EL editor and paste it there. This utility program is available for ChaosHunter owners on our technical support site: [www.ward.net](http://www.ward.net). For more information on ChaosHunter, visit [www.ChaosHunter.com](http://www.ChaosHunter.com).
